# ADULTITIS

# ADULTITIS

# ADULTITIS

A common condition occurring in people between the ages of 21-121, marked by chronic dullness, mild depression, super high stress levels, a general fear of change, and in some extreme cases, the inability to smile. Onset can be accelerated by an excess burden of bills, responsibilities, or a boring work life. Generally, patients in this condition are not fun to be around.

The background of the image features several donuts with purple frosting and multi-colored sprinkles. The donuts are arranged in a pattern, with some in the foreground and others slightly behind, creating a sense of depth. The overall color palette is dominated by purple and blue tones, with the sprinkles adding small bursts of red, yellow, and green.

"Speed Racer." Oil on canvas. Original is SOLD. [Buy the print.](#)

Happy Sunday!

The cheetah is known for being fast. Really fast. It's the fastest land mammal, achieving running speeds of up to 70 miles per hour. But what most people don't know is that the cheetah can't maintain those speeds for long. In fact, a cheetah spends little of its time running. It needs to recuperate and build up energy for the next hunt.

Obviously, if a cheetah doesn't run, it cannot eat. But if the cheetah doesn't rest, it cannot run. If the cheetah spent all its time doing what it does best, it would die.
